

WCCI TO INSTALL NEW TRANSMITTER ON WEDNESDAY MAY 20TH 2015

WCCI General Manager Beaver Miller announces that a new state of the art transmitter & audio processing system will be installed this Wednesday May 20th 2015.

WCCI has purchased a Nautel NV5LT transmitter with a top of the line Orban 5500 stereo processor. Nautel is the leading manufacturer of broadcast transmission equipment. The new system is all solid state for increased reliability and outstanding sound quality. This new system will replace the current Harris 5K1 that was installed in 1989 when WCCI was preparing to increase power from 3,000 to 25,000 in the fall of 1990. This is the 3rd new transmitter installed since WCCI went on the air in 1971.

The installation of the new transmitter will require WCCI to be off the air beginning at about 8am Wednesday May 20th. During the installation on Wednesday WCCI will continue to broadcast live on the internet at wcciradio.com. WCCI completion of the project should be sometime Wednesday afternoon.
